

ADITYA S

✉ contact@xditya.me 🌐 xditya.me 🐙 github.com/xditya 📄 in/xditya

Summary

Full-stack engineer and open-source maintainer with 4+ years building production-grade web systems, automation platforms, and AI-integrated applications. Maintainer of open-source projects with **1M+ users globally**; ranked **#12 in top public GitHub contributions in India (2021)**. Experienced across the full delivery lifecycle — backend architecture, frontend, DevOps, CI/CD, and production debugging. Seeking high-impact roles at product-focused startups and companies.

Technical Skills

Languages: Python, TypeScript, JavaScript, Java, C++, Kotlin, Dart, HTML/CSS

Frontend: React, Next.js, Angular, Flutter, Jetpack Compose

Backend: Node.js, Deno, FastAPI, Flask, Spring Boot, REST APIs, WebSockets

AI / ML: BERT, Pretrained LLMs, GenAI Workflows, Retrieval & Summarisation Systems

DevOps & Infra: Docker, GitLab CI/CD, GitHub Actions, AWS (RDS, EC2), Linux, Shell Scripting

Databases: MongoDB, MySQL, PostgreSQL, Redis, Amazon RDS, Elasticsearch (ELK)

Other: Web Scraping (Playwright, BeautifulSoup), Telegram/Discord Bot Dev, Arduino, ESP32

Experience

Product Engineer – TelcoHub Platform

Jan 2025 – Present

UST

Kerala, India

- Led **Angular framework migration** for a large-scale enterprise telecom frontend – modernising legacy modules, resolving version and TypeScript compatibility issues, and significantly improving long-term codebase maintainability.
- Built and maintained **Spring Boot microservices** for telecom business workflows; optimised MySQL queries, resolved foreign key and connection timeout issues, reducing average API response times by **40%** through DTO restructuring and query tuning.
- Owned **GitLab CI/CD pipelines** across multi-environment deployments – introduced changelog automation, Microsoft Teams webhook notifications, and streamlined release workflows, cutting release turnaround by **30%**.
- Drove production reliability using **ELK/Elasticsearch** log analysis and live incident debugging across distributed Spring Boot services; managed SSH/Git connectivity issues and rollback strategies in production.
- Improved developer productivity by standardising environment configurations, Git workflows, and release engineering processes across the TelcoHub engineering team.

Lead Developer

2021 – Present

TeamUltroid (Open Source)

Remote

- Architected and maintain **Ultroid** — an open-source Telegram userbot framework in Python with **2.9k+ GitHub stars**, **8k+ forks**, and **25k+ active deployed instances** worldwide.
- Designed a modular plugin system with **200+ community plugins**, enabling extensibility without core changes; managed releases, code reviews, and contributor workflows on GitHub.
- Code preserved in GitHub's **Arctic Code Vault** — recognising significant open-source impact.

Tech Intern

2024

BreadcrumbsAI

Remote

- Built robust web scraping pipelines in Python using **Playwright** and **BeautifulSoup** to extract and structure web data at scale for AI training workflows.
- Implemented error handling, retry logic, and structured logging to ensure reliable, uninterrupted data collection in production.

Project Lead & Backend Developer

2022 – 2024

Google Developer Student Clubs, MBCET

Kerala, India

- Led backend development for the GDSC MBCET website and built automation scripts for event logistics, reducing manual effort by ~60%.
- Mentored junior developers on REST API design, Git workflows, and deployment best practices.

Campus Lead

2023 – 2024

GTech µLearn, MBCET

Kerala, India

- Drove campus-wide skill development initiatives, growing student participation to achieve **1 Million karma points** — a Kerala Government-recognised learning milestone.
- Organised technical workshops and peer-learning sessions, increasing active learner count by 40% within a semester.

Projects

Ultroid | *Python, MongoDB, Docker, Shell* | [GitHub](#)

Active

- Open-source Telegram automation framework with **2.9k+ stars**, **8k+ forks**, and **7,900+ active users**; features 200+ modular plugins for utility, moderation, and automation.
- Containerised with Docker for portable deployment; actively maintained with CI-driven release workflows.

ChannelActions Bot | *TypeScript, Deno, MongoDB, i18n* | [GitHub](#)

Active

- Telegram bot automating channel join-request workflows (auto-approve, decline, welcome messages) for **1M+ active users worldwide**; supports **25+ regional languages** via i18n.

ChannelAutoPost | *Python, Telegram API* | [GitHub](#)

237 stars · 364 forks

- Telegram bot that cross-posts channel messages instantly without the forwarded tag; widely adopted with 237 stars and 364 forks in the Telegram developer community.

Campus Services Management System (CSMS) | *Flutter, Deno, TypeScript, ESP32, MongoDB* | [GitHub](#) **Final Year**

- Full-stack campus operations platform integrating **print queue automation** with real-time status, **digital slip/gate-pass approvals**, and **IoT-connected vending machines** with QR-based wallet payments.
- Integrated ESP32/ESP32CAM hardware for vending machine control; built a multiplatform Flutter app as a unified student interface across all campus services.

Telethon Snippets — VSCode Extension | *TypeScript, VSCode API* | [Marketplace](#)

5,000+ installs

- Published VSCode extension providing Telethon code snippets for Telegram bot development, with **5,000+ installs** on the Visual Studio Marketplace.

AyuVritt | *Next.js, Node.js, BERT*

Hackathon Project

- AI platform bridging Ayurvedic medicine and modern pharmacology using **BERT-based models** for herb-formulation analysis, drug-drug interaction evaluation, and side-effect risk assessment.

SensoryEcology — IoT Monitor | *C, Arduino UNO, NodeMCU, Deno, Jetpack Compose* | [GitHub](#)

Mini Project

- Real-time environmental monitoring system tracking temperature, air quality, and gas levels via Arduino/NodeMCU sensors, with a live web and Android dashboard for visualisation and control.

Achievements & Recognition

#12 Top GitHub Contributor in India (2021): Ranked among the top public contributors nationally; 587+ followers; code archived in GitHub's Arctic Code Vault.

EDEN 3.0 Hackathon Winner (2024): 1st place at Marian Engineering College for an AI-assisted employee management system with automated promotion tracking and HR reporting automation.

Top 100 Coders — Kerala Govt. (2023): Qualified for the μ Learn Top 100 Coders initiative at HuddleGlobal, recognised by the Government of Kerala.

757+ hours tracked coding (WakaTime): Python (37%), TypeScript (30%), Dart (7%) — across 206+ public repositories.

Education

Mar Baselios College of Engineering and Technology

Kerala, India

Bachelor of Technology in Electronics & Communication Engineering

2021 – 2025
